

# 3 Benefits of using RESTful API

with **FSS Field Service Solutions**

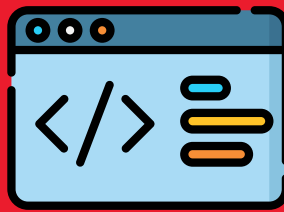

The RESTful Web Services style is well documented and well adopted, allowing for communication between your other applications and your FSS installation. This integration allows you to easily connect your other systems to FSS. This can be used for customized reporting, automatic invoicing through your accounting package or even a simple script to send DTC and DVI reports to your mechanics so they know what to expect before the vehicle even reaches the garage.

**Here are three benefits that your business may see by integrating RESTful API with your current FSS platform:**

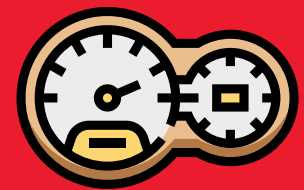

**1.**

Easy integration with other applications, including other AssetWorks applications and BI reporting tools.

**2.**

Language Agnostic – RESTful API is a standard across the programming industry. Your existing development team already knows how to use it, so you're not starting over from scratch!

**3.**

Access your data without using a browser. RESTful API can be used to create small or fully featured applications or scripts that can be interfaced with FSS, using a simple custom GUI or even a spreadsheet!

## **BONUS Benefit**

Self-Documented platform provides the actual API calls to make, saving time and significantly reducing the required skills to implement.

AssetWorks Field Service Solutions (FSS) understands that no two operations are alike. We work hard to find the best solution for our customers and find ways to make their operations more efficient. To find out more about RESTful API and how FSS can help you integrate with other systems, contact one of our sales reps today.
