

AssetWorks GPS Telematics

AssetWorks Field Service Solution (FSS) is a comprehensive GPS/telematics solution for the tracking and management of your vehicles, assets, and drivers. AssetWorks FSS goes beyond your standard features, so you can make the best decisions for your fleet. Key functionality includes:

- Vehicle location tracking
- Drive behavior monitoring
 - Speeding
 - Idling
 - Excessive acceleration
 - Braking
 - Swerving
 - Unauthorized vehicle use
- Geofencing
- Utilization tracking/reporting
- Yellow Iron tracking
- Non-powered asset tracking
- Trailer tracking
- Real time status alerts
- History / breadcrumb trail
- Heat map driver trends
- PTO monitoring
- Find closet vehicle
- Digital/Analog input monitoring
- Mileage/engine hours capture
- DTC/MIL reporting

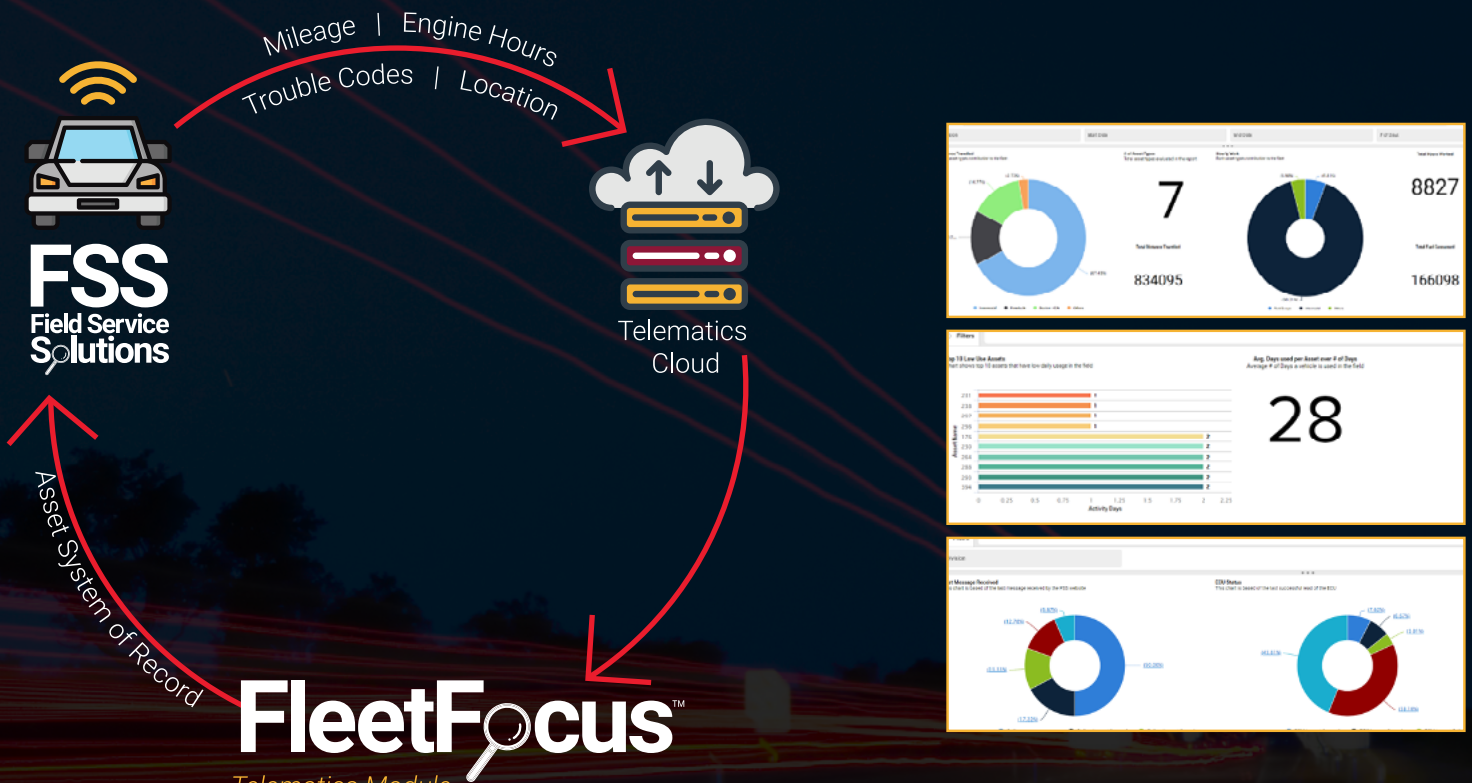

Analytics/Reporting

With a comprehensive reporting and analytics engine, FSS helps make sense of the data collected and drive action where needed. With a combination of canned reports and user created reports, the powerful analytics engine ensures you pull out the data that is relevant to your organization.

FleetFocus and FSS Integration

As part of the AssetWorks integrated product family, FSS is the only telematics solution that offers two-way integration with FleetFocus. All asset data synchronizes automatically between FleetFocus and FSS, ensuring accurate and consistent data between systems, while eliminating manual data manipulation processes. We're able to capture key data points from light and heavy-duty vehicles and other high value assets. Key integration points and features include:

- Mileage
- Engine hours
- Location
- Speeding
- Vehicle Location/History
- Diagnostic Trouble Codes (DTCs) and Malfunction Indicator Lights (MILs)

FleetFocus™

Telematics Module

- Validates incoming meter readings
- Trouble code prioritization
- Custom workflows / notifications / service requests

Asset System of Record

Your AssetWorks FleetFocus is the system of record for asset data. Additions, modifications, or terminations in your fleet flow down automatically to FSS. That means you only need to maintain the one database of assets. You no longer have to jump from system to system for management of database synchronization. Giving you the advantage of managing only one data set of assets for your both your maintenance system and your GPS/telematics platform.

Beyond GPS/Telematics

AssetWorks FSS is a modular solution that goes beyond GPS/telematics with expansion modules including:

- ELD (Electronic Logging Devices)
- Vehicle Inspection
- Electronic Field Ticketing & Dispatch
- Lone Worker Monitoring
