

Telematics Cloud Platform

AssetWorks Telematics Cloud Platform

The AssetWorks Telematics Cloud platform allows your telematics provider of choice to integrate into your instance of FleetFocus through the cloud environment. With Telematics Cloud, fleet managers have real-time access to vehicle location data, as well as diagnostics and maintenance alerts, in one integrated platform.

Combining your current AssetWorks FleetFocus system with the GPS technology of choice, you're able to capture key data points. Some examples of these key data points that integrate into FleetFocus are:

Odometer Readings

- Accurate & timely meter readings ensure your preventative maintenance program is using the most up to date information.
- For users of the KeyValet module, the Telematics Cloud integration allows for the capture of mileage on a per reservation basis to help further track additional fleet utilization elements.

Measures

- Engine Hours are captured directly from the ECM. This automated capture ensures hourly-based PM schedules are optimized.
- Electric Vehicle State of Charge (*available from select Telematics Providers)

Trouble Codes

- The Telematics Cloud provides real-time updates on any vehicle trouble codes. The ability to prioritize key trouble codes and provide real time alerts in FleetFocus, ensures that you can address any serious issues in a timely manner and helps avoid vehicle use when there are serious issues that could further damage the vehicle.

Location

- The Telematics Cloud solution will always be providing the current location of the vehicle to your FleetFocus users.

AssetWorks' cloud-based platform allows for building adapters with 3rd party vendors to retrieve data from their system, as well as it allows vendors to push data to the FleetFocus API. With the platform being cloud-based, the AssetWorks team can scale more quickly as well as have improved failover protection for customers.

Telematics Cloud Platform

Fully integrated telematics data in FleetFocus

All telematics data is available for FleetFocus-specific functionality, including notifications, reports, auto-generation of service requests, dashboards, and trend analysis.

AssetWorks Telematics Cloud Integrations

The ability to integrate with virtually any telematics platform that our customers are using in addition to our already robust partner network, ensures that our customers can capitalize on the value of utilizing an integrated solution.

Key Advantages:

- Automates data capture via near real-time APIs
- Eliminates manual errors
- Improved data-sharing between FleetFocus and telematic partners
- Maximizes ROI

Telematics cloud platform

Utilizing the AssetWorks Telematics Cloud, your provider's technology is integrated in near real-time with FleetFocus maintenance management system. Our growing list of Telematics Cloud partners include:

GEOTAB®

GPSINSIGHT

Ibtechnology, inc.
